

## Building renovation lower floor

In our last newsletter we mentioned that our building façade was due for renovation. In the end, the whole lower floor benefited from a resin floor-covering. Together with new paint and new lamps, the quality of light has improved considerably.

## New investments

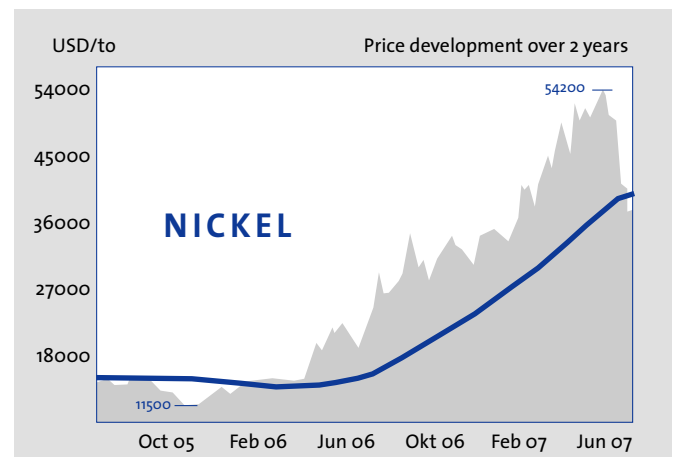

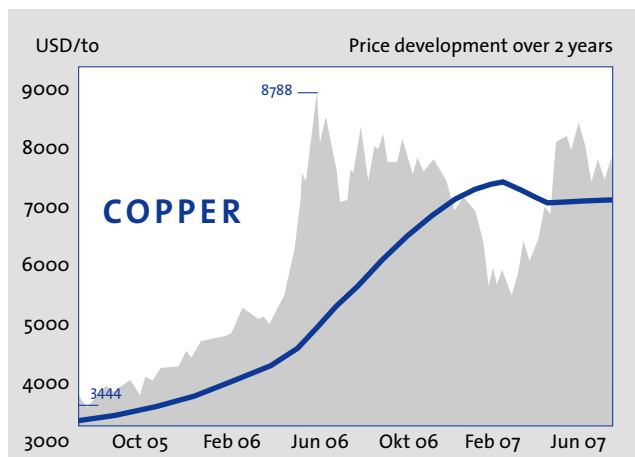

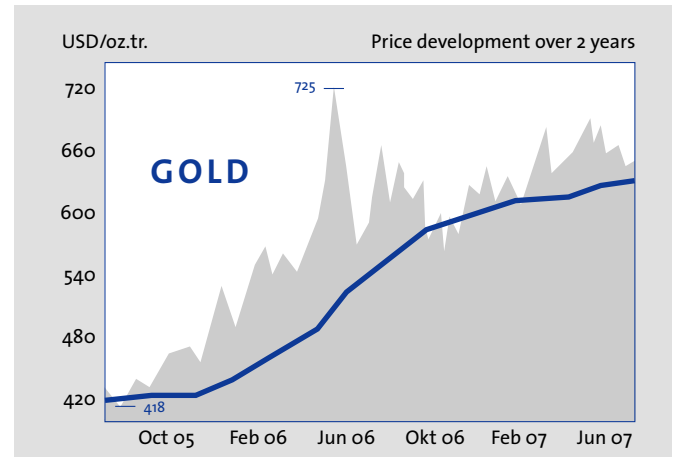

In April 2007 we were able to start using a new DECO 2000/10 with complete equipment. This is the ninth machine of this type in our machine outfit. Apart from the three Tornos DECO 2000/13 and the Maier ML20F, it is also our thirteenth CNC lathe.

View in the new quality control area on the lower floor.

## Rising prices for raw materials

The prices for raw materials have risen dramatically in the last few months. We have no choice but to pass this increase on in rising prices for our customers. We hope that the prices soon stabilise or even decrease. Even specialists find it difficult to forecast any future developments. Please understand that we have had to make regular adjustments to our prices recently.
